1.01

Oplemenjena iverica

Oplemenjena iverica je iverica presvučena dekorativnim papirima koji su prethodno impregnirani melaminskim smolama. Proces oplemenjivanja obavlja se pod visokim tlakom i temperaturom, te se u tom procesu formira struktura na dekorima. Površina ploča može biti mat ili polumat pa sve do visokog sjaja, a između njih se nalazi čitav niz posebnih površinskih tekstura koje daju dojam različitih materijala, od kamena, keramike, betona, metala pa sve do finih drvnih površina kod kojih struktura pora odgovara prikazanom drvnom dekoru. Oplemenjena iverica kao materijal vrlo je rasprostranjena i relativno jednostavna za primjenu u područjima izrade namještaja, opremanja i uređenja interijera.

Mat

Kod Mat površina nema refleksije svjetlosti stoga one pružaju jedinstven izgled i baršunast taktilni osjećaj. Boje mat površina imaju posebnu dubinu i intenzivnost. Izuzetnih su mehaničkih svojstava, između ostalog tu spada i otpornost na otiske prstiju, te se obrađuju standardnim metodama.

Visoki sjaj i Acryl visoki sjaj

Sjajni materijali u raznim bojama daju neograničene opcije kod dizajna interijera. Oplemenjeni MDF dolazi u izvedbi jednostanog ili obostranog sjaja. Ploče su obložene prozirnom zaštitnom folijom koja se sa proizvoda skida tek nakon obrade i montaže. Acryl visokog sjaja nanesenog na MDF ploče doista ima odlike najvišeg sjaja gdje se doslovno sve oslikava na površini ploče. Acryl ploče visokog sjaja se standardno obrađuju, pile i kantiraju bez ikakvih posebnih postupaka.

Profilirane ploče

Cannettato ploče krase reljefna struktura površine koja se proteže kroz cijelu ploču bez prekida. Prvo što se primjeti je teksturalni aspekt. Rebrasti uzorci dodaju slojevitost površini elemenata, stvarajući interesantan vizualni efekt koji privlači pažnju. Ova tekstura može biti suptilna i nježna, stvarajući osjećaj fluidnosti ili može biti izražena i dramatična, stvarajući intenzivan dojam pokreta.

Cannettato ploča izrađena je od rebraste pet folije na podlozi od MDF-a. Samo prednja strana ploče je stukturirana. Stražnja strana ploče je oplemenjena melaminskom folijom u istoj boji kao i prednja strana.

Mogu se koristiti u različitim stilovima uređenja interijera, od suptilnih detalja do glavnih elemenata, prilagođavajući se dizajnu i preferencijama vlasnika prostora. Bez obzira na kontekst, rebrasti uzorci na namještaju uvijek će dodati živost, teksturu i karakter prostoru, što ga čini zanimljivijim i privlačnijim.

Prednost ploče Cannettato je što se može lakirati u željenu boju s odgovarajućim lakovima. Preporučamo posavjetovati se s profesionalnim lakirerom kako bi postigli savršen rezultat.

Kuhinjske radne ploče

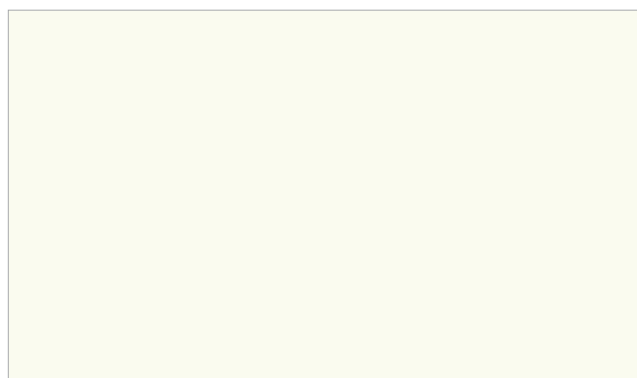

Kuhinjske radne ploče imaju povećanu otpornost na ogrebotine, udarce, kemikalije i toplinu, stoga pružaju dugotrajnu kvalitetu. Ploče iverice oplemenjene laminatom, sa zaobljenim rubom ili sa ravnim rubom, najčešće se koriste. Osim njih postoji i cijeli niz radnih ploča koje imaju svoje prednosti i upotrebu kao što su Compact radne ploče, masivne kuhinjske radne ploče, Getacore radne ploče. Sve površine kuhinjskih radnih ploča su antibakterijske i sigurne za pripremu hrane.

Zidni paneli

Zidni paneli čine prostor elegantnim, daju mu toplinu i nevjerojatno se dobro uklapaju u svaku prostoriju. Obično se postavljaju između radne ploče i gornjih kuhinjskih elemenata. Odlično su rješenje umjesto keramičkih pločica jer dolaze u jednom komadu i nemaju fuga te se time i lakše održavaju. Zidni panel čini ploča iverice koja je s obje strane obložena laminatom. Moguće ga je uskladiti sa dekorom radne ploče i dekorom iverala, ali i koristiti panel koji će stvoriti kontrast. Osim skladišnih dekora, zidne panele je moguće naručiti u svim dekorima radnih ploča Egger.

Keramičke ploče velikog formata

Elegancija i funkcionalnost u svakom prostoru. Keramičke ploče velikog formata predstavljaju savršen spoj estetike i izdržljivosti pružajući sofisticiran izgled svakom interijeru. Njihova besprijeekorna površina stvara luksuzan dojam uz minimalan broj fuga, što doprinosi eleganciji i lakoći održavanja. Idealne su kuhinjske i kupaonske radne ploče, otoke, ali i za oblaganje zidova i podove. Otporne su na toplinu, ogrebotine i mrlje. Njihova higijenska svojstva i jednostavno čišćenje čine ih savršenim izborom za moderne, funkcionalne prostore.

SM Quartz

Na bazi kamena. Izuzetnih estetskih karakteristika i otpornosti. Idealna površina za visoko frekventne prostore i svakodnevno korištenje. Izrađene od kvarcnog pijeska i pažljivo odabranih smola koje zatim prolaze intenzivan proces proizvodnje, gradiranja i poliranja, SM Quartz udovoljava strogim međunarodnim standardima koji su potrebni za prehrambenu industriju i sigurno unutarnje okruženje. SM Quartz je idealan za širok raspon primjena, od prestižnih velikih otvorenih komercijalnih prostora do intimnih detaljnih rješenja za dizajn interijera u kuhinjama, kupaonicama, podovima i još mnogo toga. Najučestalije su kvarc radne ploče.

Fenix

Inovativan proizvod za dizajn interijera koji je razvila Arpa Industriale, a koji kombinira elegantna estetska rješenja sa najsuvremenijim tehnološkim svojstvima.

Vanjska površina FENIX®-a obuhvaća upotrebu nanotehnologije i okarakterizirana je kao nova generacija akrilne smole koja je stvrdnuta i očvršćena korištenjem procesa pomoću snopova elektrona, čime se otvaraju novi pristupi u području dizajna interijera.

Sa malom refleksijom svjetlosti, površina Fenix-a je ekstremno mat, bez otisaka prstiju i pruža jako ugodan i mek taktilni osjećaj. Paleta uključuje bezvremenske i klasične tonove koji su inspirirani prirodom, kao i nijanse u optici bisera i metala koje su vrlo učinkovite na mat površini.

Tehnologija Bloom povećava Fenix-ovu kompoziciju, zadržavajući pritom karakteristična svojstva FENIX-a. S Bloomom, tehnologija lignina je uvedena kako bi se značajno smanjila količina fenola u smoli za 50%.

Getacore

Akrilno povezana mineralna sirovina identična po cijelom presjeku u boji i strukturi. Karakterizira ga jedinstvena optika kamena s izvanrednim efektom dubine. Vrlo je ugodan na dodir, topao i lako se održava. Ploče se mogu spajati bez vidljivog spoja, čime se dobiva dojam monolitnosti. Stupanj sjaja završne obrade je prema želji (mat, manje ili više sjajno). Široka paleta boja materijala nudi se u kompoziciji s teksturama, a ta uzajamna povezanost daje mogućnost da se kod uređenja interijera ispriča uvijek posebna priča. Osim Getacore ploča u debljinama 3 i 10 mm, u ponudi su i gotove radne ploče debljine 38 mm.

Compact ploče

Compact ploče imaju višeslojnu strukturu od jezgrenih slojeva papira i dekorativnog papira impregniranih melaminskom smolom. Slojevi papira prešani su pod visokim pritiskom i temperaturom. Zahvaljujući tome idealne su za primjene u područjima intenzivnog korištenja i u interijerima gdje se očekuje veliko naprezanje ili postoje veći zahtjevi u pogledu čistoće i higijene poput kuhinja, kupaoonica, bolnica i restorana. Elegantno i moderno rješenje iznimnih karakteristika u velikom rasponu dostupnih dekora.

Laminati

Laminat ili ultrapas je tanki fleksibilni dekorativni materijali koji se isporučuju u listovima ili rolama i služe za oplemenjivanje površina različitih materijala kao npr. iverice ili MDF-a. Odlikuju se većom tvrdoćom i otpornošću na mehanička oštećenja, toplinu, vodu, vlagu, razrijeđene kiseline i otapala. Proizvodi se prešanjem nekoliko slojeva dekorativnog papira impregniranih melaminskim smolama i većeg broja listova pergamentnog papira koji čini osnovu laminata gdje broj listova definira debljinu samog laminata. Prešanje se odvija pod visokim tlakom i temperaturom, a u tom postupku se definiraju sva mehanička i estetska svojstva laminata. Najčešće se upotrebljava za oblaganje radnih ploha, za oblaganje uredske, laboratorijske i radioničke opreme, oblaganje namještaja itd.

Dekoratívne zidne obloge

Eldesil, dekorativna akustična obloga, čini drvene letvice napravljene od crnog mediapana i prirodnog furnira na podlozi od debelog crnog filca od reciklirane PET ambalaže. Eldesil obloge služe za dekorativno oblaganje zidova i stropova, a istovremeno imaju i akustična svojstva čime se reducira buka u stambenom ili komercijalnom prostoru.

Lamelio paneli izrađeni su od 80% recikliranog polistirena PS, što proizvod čini iznimno ekološki prihvatljivim. S Lamelio zidnim panelima može se interijeru dati jedinstven karakter. Montaža je vrlo jednostavna, a dolaze u različitim dekorima, najvećem rasponu drvnih.

DecoWall – dekorativne zidne obloge na podlozi od OSB-a. Bilo da se radi o stambenom prostoru, garaži ili poslovnom prostoru, mogućnosti primjene su brojne. Osnovicu čini standardna EGGER OSB ploča koja ima profil pero/utor na sve četiri stranice što čini postavljanje jednostavnim i bez vidljivih spojeva.

Furnirana iverica

Iverica koja je obložena s obje strane prirodnim plemenitim furnirom. Time se zadržala čvrstoća, mirna i ravna površina iverice, a istovremeno se zadržao i vanjski efekt prirodnog drva. Furnir je obložen kao sirov i samo je industrijski brušen te je potrebna daljnja obrada brušenja, bojanja i lakiranja po istom postupku kao i obrada masivnog drva.

CDF ploče

Kompaktne ploče vlaknatice, robustne i vatrootporne. Vrlo zbijena vlaknasta ploča može se s velikom lakoćom obraditi na cijeloj njezinoj dubini, pa ih se, između ostalog, može koristiti za stvaranje prilagođenih kreacija i trodimenzionalnih elemenata. Primjenjuju se u izradi namještaja i opremanje poslovnih prostora, za izradu svlačionica i sanitarnih kabina te u umjetnosti i dizajnu.

CDF ploče

SWISSCDF

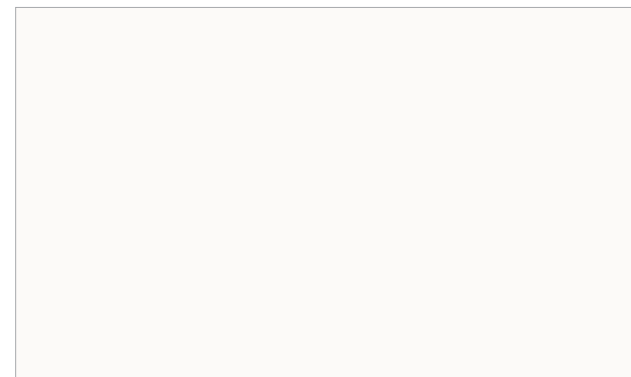

Kompaktne ploče vlaknatice – Drvo u svom najboljem izdanju!

Glavne karakteristike i područja primjene DHF ploča:

SWISSCDF je jedinstven u pogledu svog dizajna, gustoće i izdržljivosti. Zahvaljujući svom višeslojnom dizajnu, SWISSCDF je predodređen za proizvodnju složenih i sofisticiranih linijskih struktura. SWISSCDF je otporan na prskanje vode te stoga savršeno prikladan za kreativne primjene na koje se najčešće nailazi u okruženjima s visokom vlagom.

SWISSCDF je ekološki prihvatljiv:

- Izrađen od švicarskog drveta koje potječe iz održivo upravljanih šuma
- tijekom njegove proizvodnje koristi se 90% obnovljivih izvora energije
- SWISSCDF se u potpunosti uklapa u kaskadni ciklus korištenja drva te je biorazgradiv
- Štedi CO2 i štiti okoliš

MDF i HDF ploče

Medijapan ili MDF ploče su srednje guste vlaknatice, homogene po debljini, proizvedene od usitnjenog drva listača uz minimalan dodatak veziva. Gustoća po cijeloj debljini čini ih pogodnim za obradu glodanjem čime se u znatnoj mjeri koriste kao nadomjestak punom drvetu. Mala poroznost po presjeku pogodna je i kod obrade lakiranjem što dodatno povećava primjenu MDFa u izradi namještaja, prije svega za fronte različitih oblika, a ima i široku primjenu kao nosivi materijal kod furniranja.

HDF ili High Density Fiberboard je ploča vlaknatice sastavljena od drvenih vlakana koja se pod tlakom i veliko temperaturom prešaju i komprimiraju. Koriste se kao nosivi materijal za veliko opterećenje uz malu debljinu.

Neoplemenjena iverica

Neoplemenjena iverica je proizvod na bazi drva izrađen posebnom tehnikom kontinuiranog prešanja drvnog iverja pod visokim tlakom i temperaturom uz dodatak ljepila. Drvno iverje se prethodno dobiva iveranjem drva, a nakon čega se suši posebnim postupcima i sortira kao predradnja za prešanje.

Neoplemenjena iverica

Redni br.	Naziv proizvoda	Debljina mm	Dimenzija ploče
1	Iverica	10, 12, 16, 18, 25	2800x2120
3	Iverica E1P3 Vlagootporna	10	2800x2070
4	Cjevasta iverica	33	1920x800
5	UNILIN Sirova iverica Beispan	38	2800x2070

Neoplemenjena iverica se radi u većoj paleti debljina, a debljina se definira debljinom tepiha iverja prije prešanja.

Neoplemenjena iverica je bazni ili osnovni proizvod za sve daljnje proizvode u procesu oplemenjivanja, opl. iverica, radne ploče i dr.

Rubne trake

Rubne trake su proizvod kojeg odlikuju dvije komponente, estetska i upotrebna. Upotrebljavamo ih za zatvaranje rubova elemenata od oštećenja udarcima, ali i estetski da se ne vidi gola iverica. U ponudi je osnovna kategorija traka, ABS traka kao i trake za lasersko kantiranje. Izrađuje se u različitim debljinama i širinama prilagođenim debljini ploča koje treba oblagati. Dekori svih rubnih traka usklađeni su s dekorima proizvođača kolekcije oplemenjene iverice i kuhinjskih radnih ploča.

ploče**

Šperploče

Šperploče se sastoje od unakrsno postavljenog i međusobno sljepljenog furnira. Po vlagootpornosti ih dijelimo na one koje su ljepljene vodoopornim ljeplilom (naziv WBP -izveden iz engleskog jezika «Water Boiled Proof» koji označava da je ljeplilo s kojim su se lijepili slojevi vodooporno), te na one ljepljene vlagootpornim ljeplilom (naziv MR - izveden iz engleskog jezika «Moisture Resistant») što znači da je ljeplilo s kojim su se lijepile ploče vlagootporno.

Upotreba šperploče:

- građevina (za izradu konstrukcija, pregradne zidove, podne ploče...)
- proizvodnja namještaja (stubišta, razni nosivi elementi, šablone, police, stijene, krevetne podnice...)
- transport i skladištenje (ploče kamionskih podova, ploče za regale u skladištima, brodske rešetke za cargo brodove, kontejneri...)
- specifična upotreba na ostalim područjima Prednosti šperploča u usporedbi sa ostalim lijepljenim pločama su: odlična čvrstoća na savijanje, dobar modul elastičnosti, čvrstoća te tvrdoća.

Kvalitativno se razlikuju: B/BB – stolarska kvaliteta C/C – ambalaža

Panel ploče

Panel ploča je površinski presvučena ploča s ljuštenim furnirom od brezova drveta. Središnjica je izrađena od masivnih letvica širinski i dužinski spajanih lijepljenjem. S obzirom na broj slojeva mogu biti troslojne i peteroslojne, peteroslojne su kvalitetnije jer imaju dodatan sloj furnira i kao takve cjenjenije su u stolarijama.

Upotreba:

svugdje gdje postoji zahtjev za visoko kvalitetnim materijalima otpornim na savijanje i trošenje; brodogradnja, industrija namještaja, ljekarne, knjižnice, shopping centri. Vrlo je praktična, osobito u 38mm debljine za izradu dovratnika. Lakoća obrade, brzina izvedbe i neupitna kvaliteta. Elgrad nudi i razne vrste furniranih panel ploča.

OSB 3 ploče

OSB ploče se proizvode prešanjem i lijepljenjem pojedinih slojeva sastavljenog od dugog i tankog iverja (makroiverja).

Prednosti:

- Odlična statička i mehanička svojstva
- Toplinska izolacija
- Atraktivan izgled i obrađena površina
- Niska razina formaldehida (E1)
- Stabilnost i čvrstoća ploča
- Higijenski čista ploča
- Standardizirane dimenzije (DOKA, PERI...)

Zbog atraktivne strukture, ove ploče se sve više upotrebljavaju i kao estetski dio prostora. Sama površina prikazuje dijelove pravog drveta u prirodnoj ljepoti.

Podjela OSB ploča s obzirom na rub:

- Ploče s ravnim rubom
- Ploče s pero-utor rubom, T/G

OSB ploče	Dimenzije	0,8 mm	12 mm	15 mm	19 mm	18 mm	22 mm

DHF ploče

DHF – Drvena paropropusna ploča

Egger DHF je paropropusna drveno - vlaknasta ploča otporna na vlagu. Služi za „odvođenje“ vlage iz kuće prema van, kroz izolaciju, s istodobnim boljim zadržavanjem topline. Najviše se koristi za „tople“ krovove i iskorištavanje potkrovlja.

Glavne karakteristike i područja primjene DHF ploča:

- Za „tople“ krovove i iskorištavanje potkrovlja
- Svrha ploče je „odvođenje“ ili propuštanje vlage iz kuće kroz izolaciju prema van, s istodobnim boljim zadržavanjem topline
- Izolacijska zamjena za jelovu dasku i foliju (nije potrebno stavljati foliju)
- Nije potrebno stavljati dodatnu izolaciju na mjestima spajanja letvi i greda na sam DHF (probijanje čavala, vijaka i sl.)
- Sigurna, precizna i jednostavna montaža zahvaljujući otpornosti na puknuća
- Brza montaža zahvaljući printanoj rešetki za čavle
- Jaka konstrukcija
- Energetska učinkovitost
- Nizak rizik za oštećenja uzrokovana vlagom
- Otpornost na kišu, tuču, vjetar, uv zrake
- Vodostivni sloj, 2 tj. bez pokrova zimi te dva mjeseca bez krajnjeg pokrova ljeti
- Troškovno i vremenski djelotvornija od alternativnih proizvoda – ekonomično rješenje
- Egger kvaliteta

Masivne ploče

Kupci koji žele imati dio namještaja napravljen iz punog drveta, najčešće koriste masivne ploče. U ponudi imamo masivne ploče za stolove, radne ploče, gazišta itd. Tu bi izdvojili posebnu ponudu masivnih ploča od tankih lamela, u hrastu.

Opis kvalitete

- A strana - čista, slagana po boji
- BC strana - dozvoljeno učešće neprave srži (kerna) cca 25-30% u bukvi ili bjeljike u hrastu, krajnje lamele bez neprave srži (kerna), odnosno bjeljike. Dozvoljena je diskoloracija.

Masivne ploče po standardu, pri ispravnom skladištenju i korištenju, mogu imati dozvoljenu koritavost koja može iznositi do 0,5% širine elementa (mjeri se kao visina luka u odnosu na širinu ploče).

Masivne ploče se prije upotrebe, ravnomjerno, sa svih strana, moraju tretirati lakovima ili uljima za drvo.

Elgrad preporučuje tretiranje uljima za drvene površine, one za razliku od lakova pružaju izniman osjećaj prirodnosti, imaju najmanje hlapljivih tvari te ostavljaju mogućnost sanacije samo oštećenog dijela.

Drvena građa

U opremanju i uređenju interijera, masivno drvo u pojedinim situacijama pruža više od pločastih materijala i nezamjenjivo je u stvaranju topline, ugone i povezanosti sa prirodom. Ponuda je bazirana na domaćim vrstama drveta: hrast, bukva, jela, smreka, bor, ariš, jasen, orah, lipa.

Akustične ploče

Sustavna rješenja za apsorpciju zvuka

Prigušivanje zvuka je sposobnost apsorpiranja zvuka. Akustične ploče nude sustavna rješenja za apsorpciju zvuka, a koriste se za oblaganje zidova, kao pregradni zidovi, stropni sistemi, komponente namještaja, svjetlosna rješenja, post konstrukcijski elementi. Prednosti su optimalna apsorpcija zvuka, jednostavna i brza montaža, raznolike su i prilagodljive prostoru, te mogu činiti kompletne sustave, uključujući podkonstrukciju. Povećavaju produktivnost i koncentraciju u prostorima, smanjuje se stres i ometanja.

SwissCLIC

Inovativno rješenje za koncept integriranog prostora

Preciznost sustava CLIC čini svako postavljanje brzim i jednostavnim, bez potrebe za posebnim alatima. Na zidovima i stropovima, pojedinačni djelovi su bespriježno spojeni u površinu kakvu želite.

SWISSCLIC PANEL - A+

Dolazi u šest autentičnih i modernih površina u dva uzorka. Jednostavan je za postavljanje i održavanje.
