premium woven vinyl flooring

about

us

At ntgrate we create high-quality woven vinyl flooring for the contract and commercial market. With more than 60 years of experience we combine craftsmanship with high-tech innovation. Our solutions are stylish, easy to maintain and sustainably produced in Belgium.

Our mission? Leading the charge toward a carbon-neutral future! We take bold and innovative steps, reduce waste, and harness renewable energy. Proving that sustainability and design can walk hand in hand.

We do not just design floors. We design experiences. Our collections are available in rolls, tiles or playful shapes from the Versatile range and offer maximum freedom in design and application.

Leading brands around the world such as Coca-Cola, Google and Mercedes rely on our quality. From libraries, auditoriums, cinemas, theatres, waiting areas, showrooms, fitness and wellness spaces, meeting rooms, bank and insurance offices, notary offices to funeral homes, ntgrate feels at home everywhere.

ntgrate

Powered by renewable energy and with a zero-waste philosophy, our facilities are future-proof. Our BREEAM-certified building reflects our ambitions in the field of sustainability.

The exterior of our building is a visual representation of warp and weft, the two components in weaving needed to transform yarn into our woven flooring.

Our weaving unit is where tradition meets high-tech. Our jacquard looms and skilled employees weave our unique woven designs.

At the core of our process lies our custom vinyl yarn extrusion. Bi-colour vinyl is extruded around a high-tech fiberglass core. Creating the foundations for our iconic designs.

Design

The Design Collection brings together our most intricate weaving patterns. With standout patterns like Sage, Gentle, Wild, Noble, and Sharp, each design tells its own visual story. Refined, organic, or geometric.

Design.
